DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is requirement under 35 U.S.C. 121:

I. Claims 1-11, 18-20, 23-25, 30, 32, and 33, drawn to a method a block-level write operation causes a value to be written to a "...*region of a primary volume that stores a first type of a plurality of types of file system metadata*, and wherein... the primary volume stores the first type of file system metadata..", classified in class 711, subclass 114 or 161.

II. Claim 12-17, 21-22, 26-29, and 31, drawn to a system method for receiving a block-level write operation to a primary volume and associated information, in response to the associated information, determining that less than all of the block-level write operation should be transferred to a secondary site during replication of data in the primary volume, classified in class 711, subclass 162.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as receiving a block-level write operation to a primary volume and associated information, in response to the associated information, determining

Art Unit: 2182

that less than all of the block-level write operation should be transferred to a secondary site during replication of data in the primary volume. See MPEP j 806.05(d).
